EVIDENTIARY FRONTIERS: EXPLORING QUANTUM MEDICINE'S PRACTICAL EFFICACY

Ana Luiza da Silva Santos, MD and João Paulo Oliveira Lima, PhD

UNIFAN, Work Coordinator, Aparecida de Goiânia – GO, Brazil

Abstract: Quantum medicine offers a holistic approach to health and well-being, addressing all the senses and their associated discomfort. This emerging field not only encompasses preventive measures but also extends its healing potential to conditions where pain has already manifested. The comprehensive nature of quantum medicine allows for the incorporation of various medical specialties, making it a potentially transformative area of medicine. One of the fundamental aspects of quantum medicine is its association with quantum physics, which deals with physical systems and phenomena at the atomic and subatomic scale. This contrast with classical physics has led to a deeper understanding of the underlying principles governing these intricate systems. However, the exact mechanisms by which quantum medicine achieves its healing effects remain elusive, as they involve micro-particles, atoms, electrons, and protons operating on an atomic scale. These abstract piques interest in the potential of quantum medicine but emphasizes the need for further research to unveil the specific energies and processes responsible for its therapeutic outcomes.

Keywords: Quantum medicine, health, well-being, quantum physics, healing mechanisms.

Introduction

Quantum medicine takes care of all the senses (smell, taste, hearing, touch, and vision) and their pain¹. It is so broad that we dare to say that it takes care of health and well-being, including the preventive part and in the place where the pain has already set in. Any specialty may someday be considered, in the future, quantum. Along with the physical system, quantities, and values, we observe that, even being discrete, the passage from one value to another occurs discontinuously, following the laws of quantum mechanics or quantum physics². We have read works that show a revolution with the definition of quantum theory together with Einstein's theory of relativity, which contributed to the understanding of quantum physics, showing what classical physics lacks. This quantum physics concerns a physical system, whose observed magnitudes assume low values of the atomic scale, such as molecules and atoms. Although they can write macroscopic phenomena in several cases, they boil down to atoms, electrons, protons, and micro atomic particles, which leaves us without knowing what kind of energy can provide a scarring or healing without common marks for such cases.

Quantum is the adjective in the physics AREA described as energy leaps in emitting or absorbing radiation called quanta. This quantum theory was developed by Max Planck (1858-1947), Nobel Prize in Physics. There is still a

Original Article

quantum vacuum, that is, a vacuum, where there is interactive energy, where you can act and explain your action to us. The term quantum comes from "quanta", which means a phenomenon of nature with a submicroscopic character. Medicine, the result of the invisible outcome, oftentimes, could be called "quantum"³.

It is when the medicine, in any of its branches, observes the amount of energy and matter behaving in different environments or situations. Would these various states of matter be quantum states because they would reach quantum physics?⁴ The quantum defines the electron energy in the atom's orbits. When we use the computer, they will be in line with the quantum theory, as everything will depend on their physical studies, using physics or quantum physics. The quantum state describes the state of a particle. In the future, we will still have the transmission of information through quantum means, which will not depend on the means of transmission, using two or more properties. For the layman, does it seem to agree that it is a jumble of words involving the quantum or the quantum? The explanations need to be clarified so that we do not spend years without the applied quantum due to simple ignorance. It is an adjective word taken from physics, which refers to the energy leaps that we do not see, and that we apply every day, to solve things, including the ones we do not see. How to explain? Do you explain the wind? Do you explain the absence of a fire shadow in front of another light? Does it explain love? Does it explain the power of prayer?⁵ Do you know what you have? Do you believe it? This could be the beginning. The relationship between faith and medicine was very confusing in the past. During the entire treatment, the client is looking for inner peace and his/her intellectual part, which explained by the professional, can achieve the desired result. In the cases presented, we used the collaboration of the patients' minds with repetitions of words, affirmations, and positive actions. There was harmony in the doctor-patient relationship. In the present, several friends say they understand almost nothing when reading these subjects that will be of the future. The beginning is already a starting point. Not being much, it could be the beginning. What is the biggest difficulty in explaining the word energy? If we give this energy a name, can it improve? What innocence of the apostles! They saw, live, a miracle and asked for another. Subsequently, they saw the water turn into wine, and the fish and bread multiply. Why were they (the apostles) not pleased to see Jesus raise a four-day-old dead?⁶ What energy was that? What is the special way in which we can achieve the same result? He (Jesus) said that we could do the same or even better!⁷ Only admiration remains for us. How to know if a question mark would guide a manuscript? From these facts, what could we take advantage of in medicine? We look at scales, molecules, atoms involving physics, mechanics, medicine, and positive or optimal psychological well-being. How do we still explain Nikola Tesla's formulas and numbers? Tesla, in "Map to Multiplication"⁸, would be enough? Is quantum medicine recognized? We hope for more clarity to understand human health, especially regarding the type of disease, even thinking, meditating and reflecting⁹.

Material

I once heard that there would be a hospital without doctors in the USA! And could it be? If the cure takes place outside of the already known means, without customary means, without robotics, without surgical acts, yes! Would the cure be quantum? Could it be through prayer? It can if we base that the smallest particle of the atom is energy, which leads us to think that every living human being is energy in the physical plane, with words and thoughts or with numbers through the harmony and numerical combinations made by Grabovoi (2021)¹⁰. The world is built of the Soul that generates light and illuminates the information; the Mind that transforms this information; and the Consciousness that produces the active form in matters of wisdom with the possibility of being done. The mind can transform the body and heal, according to Gregg Braden¹¹. Is there a new energy field accessible, and that our DNA communicates with photons through this field, which suggests healing bodies, bringing lasting peace, and even preventing tragedies? The number or the word awaits our command and our decision to act in the energy field. Maybe like that, we would explain the function of the pineal gland or epiphysis located in the roof of the diencephalon in the brain. In the past, it was thought to be the seat of the soul and the reason for its existence.

Original Article

Healing is a way of defining the entire universe of quantum medicine. It synthesizes an idea or enables us to heal ourselves or others with the help of methods aimed at realigning the body with the mind and spirit. This energy that we create is capable of anything, whether with lay people or health care professionals. Can we help with the healing of a wound caused by a blunt object, glass, or wire? In this manuscript, we present some cases in which we cannot explain where the help for healing came from, which is beyond our routine or classical knowledge. The alignment of these energies transforms diseased cells into healthy cells. I dare say: Sadness in joy? Exchanging thoughts, changing behaviors or desires can transform cells. We have already seen difficult cases successfully resolved:

Case 1: 54-year-old female patient, without a history of cancer, presenting a nodule in the upper lobe of the right lung, measuring 2 cm in diameter, and histopathological diagnosis of adenocarcinoma. She used an affirmative healing prayer form. A month later, when doing the radiological exams, it was found that the cancer had turned into an empty cyst. (Figs. 1 to 4). How to explain a cure without specific medication or chemotherapy?

Case 2: 8-year-old male child, who suffered a domestic accident, whose wound, 4 cm long, contrary to the line of force, would require, in addition to changing the direction of the wound, suturing (figs. 5 to 7). No type of suture was performed, using only colorless tape, as the patient repeated all the time that he did not want to go to the hospital. How to explain the disappearance of the scar?

Case 3: 66-year-old male, with a wound 7 cm long by 6 cm wide, forming a triangular-shaped distribution, caused by a sickle (equipment used to cut sugar cane), cared for only 3 months after the accident, undergoing a process of granulation, infection, and crusting, whose conduct was the repetition of positive words for a week, which avoided wound debridement and skin grafting (figs. 8 and 9), because we were waiting for a vacancy in the hospital for the graft surgery. We observe that everything depends on the affirmation of those involved, saying the phrase: "I want". Because we do not understand these results, we imagine that, by quantum energy, we would explain them.

The repetition of words will depend on the concentration of the one who wants to heal for this quantum leap. In the end, the main objective of these techniques is to eliminate the blocks that make it impossible for us to reach the fulfillment of our purposes¹². It is necessary to have the courage to achieve a change in the situation or the reality that presents at the moment, which turned out to be different. Healing shows us that the human body is controlled by an intelligence network that determines whether we are healthy and whole. Many facts and events are considered change-makers. There are devices designed to aid us in quantum therapy during face-to-face or distance healing. Accordingly, we will be able to do anything like aligning intelligence for good, integrating nature in a way to defeat psychosomatic illnesses, heart diseases, tumors, and other ailments¹³. One might ask: What is neuroquantum? It is a reprogramming of happiness, regeneration, awareness, prosperity, wealth, peace, etc. According to Rolim, 2019: "Because the hospital can be linked to people who seem sick and need to receive medical care, by carrying out the cure, but not necessarily being in the hospital structure, for example, the spiritual cure referring to the mind and body"¹⁴.

Such medicine that will exist, being concerned with the well-being of the mind and with less medication, is presented in this clinical chart. We only saw similar facts at the time of Jesus of Nazareth who, without any means, he healed¹⁵. We think that, in the future, we can say: If we are good, we can be better. This will be true for any sector of medicine. How to explain a closed wound without stitches and a hospital?¹⁶

Discussion

A discussion only occurs when we look at the advantages and disadvantages of a procedure. There is no conflict of interest when care reaches the injury of the sufferer who needs care or wants to get better. In these cases, what would be better? Go to the hospital to undergo routine surgical procedures or do the first visit and give another option? A professional might question whether it would be right to clean the wound, perform conventional hemostasis with an electric scalpel, and then suture. We know that where there is damage and loss of skin continuity, there will be a scar. This is what we expect after a surgical procedure and will never guarantee the absence of scarring.

The discussion leads us to say that we cannot despise this quantum energy that involves goodwill and affirmative thoughts between doctor and patient. Seeing and believing in DNA changes, wounds without scarring and tumor disappearance, makes us have a lot of faith because the important thing is that the result is better than expected. Will med bed technology enter this discussion? What we expect from the future may be beyond new technologies, but also a new medicine based on quantum and with results that may surprise us by its quality.

Conclusion

During my 47 years as a surgeon, 22,000 surgeries without death, and seeing that science continues to evolve, is a reason to be very grateful to the Creator and to doctors of goodwill. In the past, facts like these would be the result of acts of shamans, healers, and curious people. It is worth waiting for the advancement of medicine and the discovery of new energies, to achieve such a feat and see other results achieved in other ways, with an integrative medicine, where we would mix energy with already known procedures. Although the cases presented above are possible to treat by conventional medicine, they open a new door to a promising future. The study involves the human mind and can contribute to health. It opens up a new scientific field that can be deepened with a greater number of clinical cases due to surprising results.

Conflicts of Interest

The authors declare there are no conflicts of interest regarding the publication of this paper.
